
Observed and solved retail prices
Lines overlap by construction: costs were inverted from observed prices.

Solved minus observed price

Separate error axis exposes differences hidden by overlapping price lines.

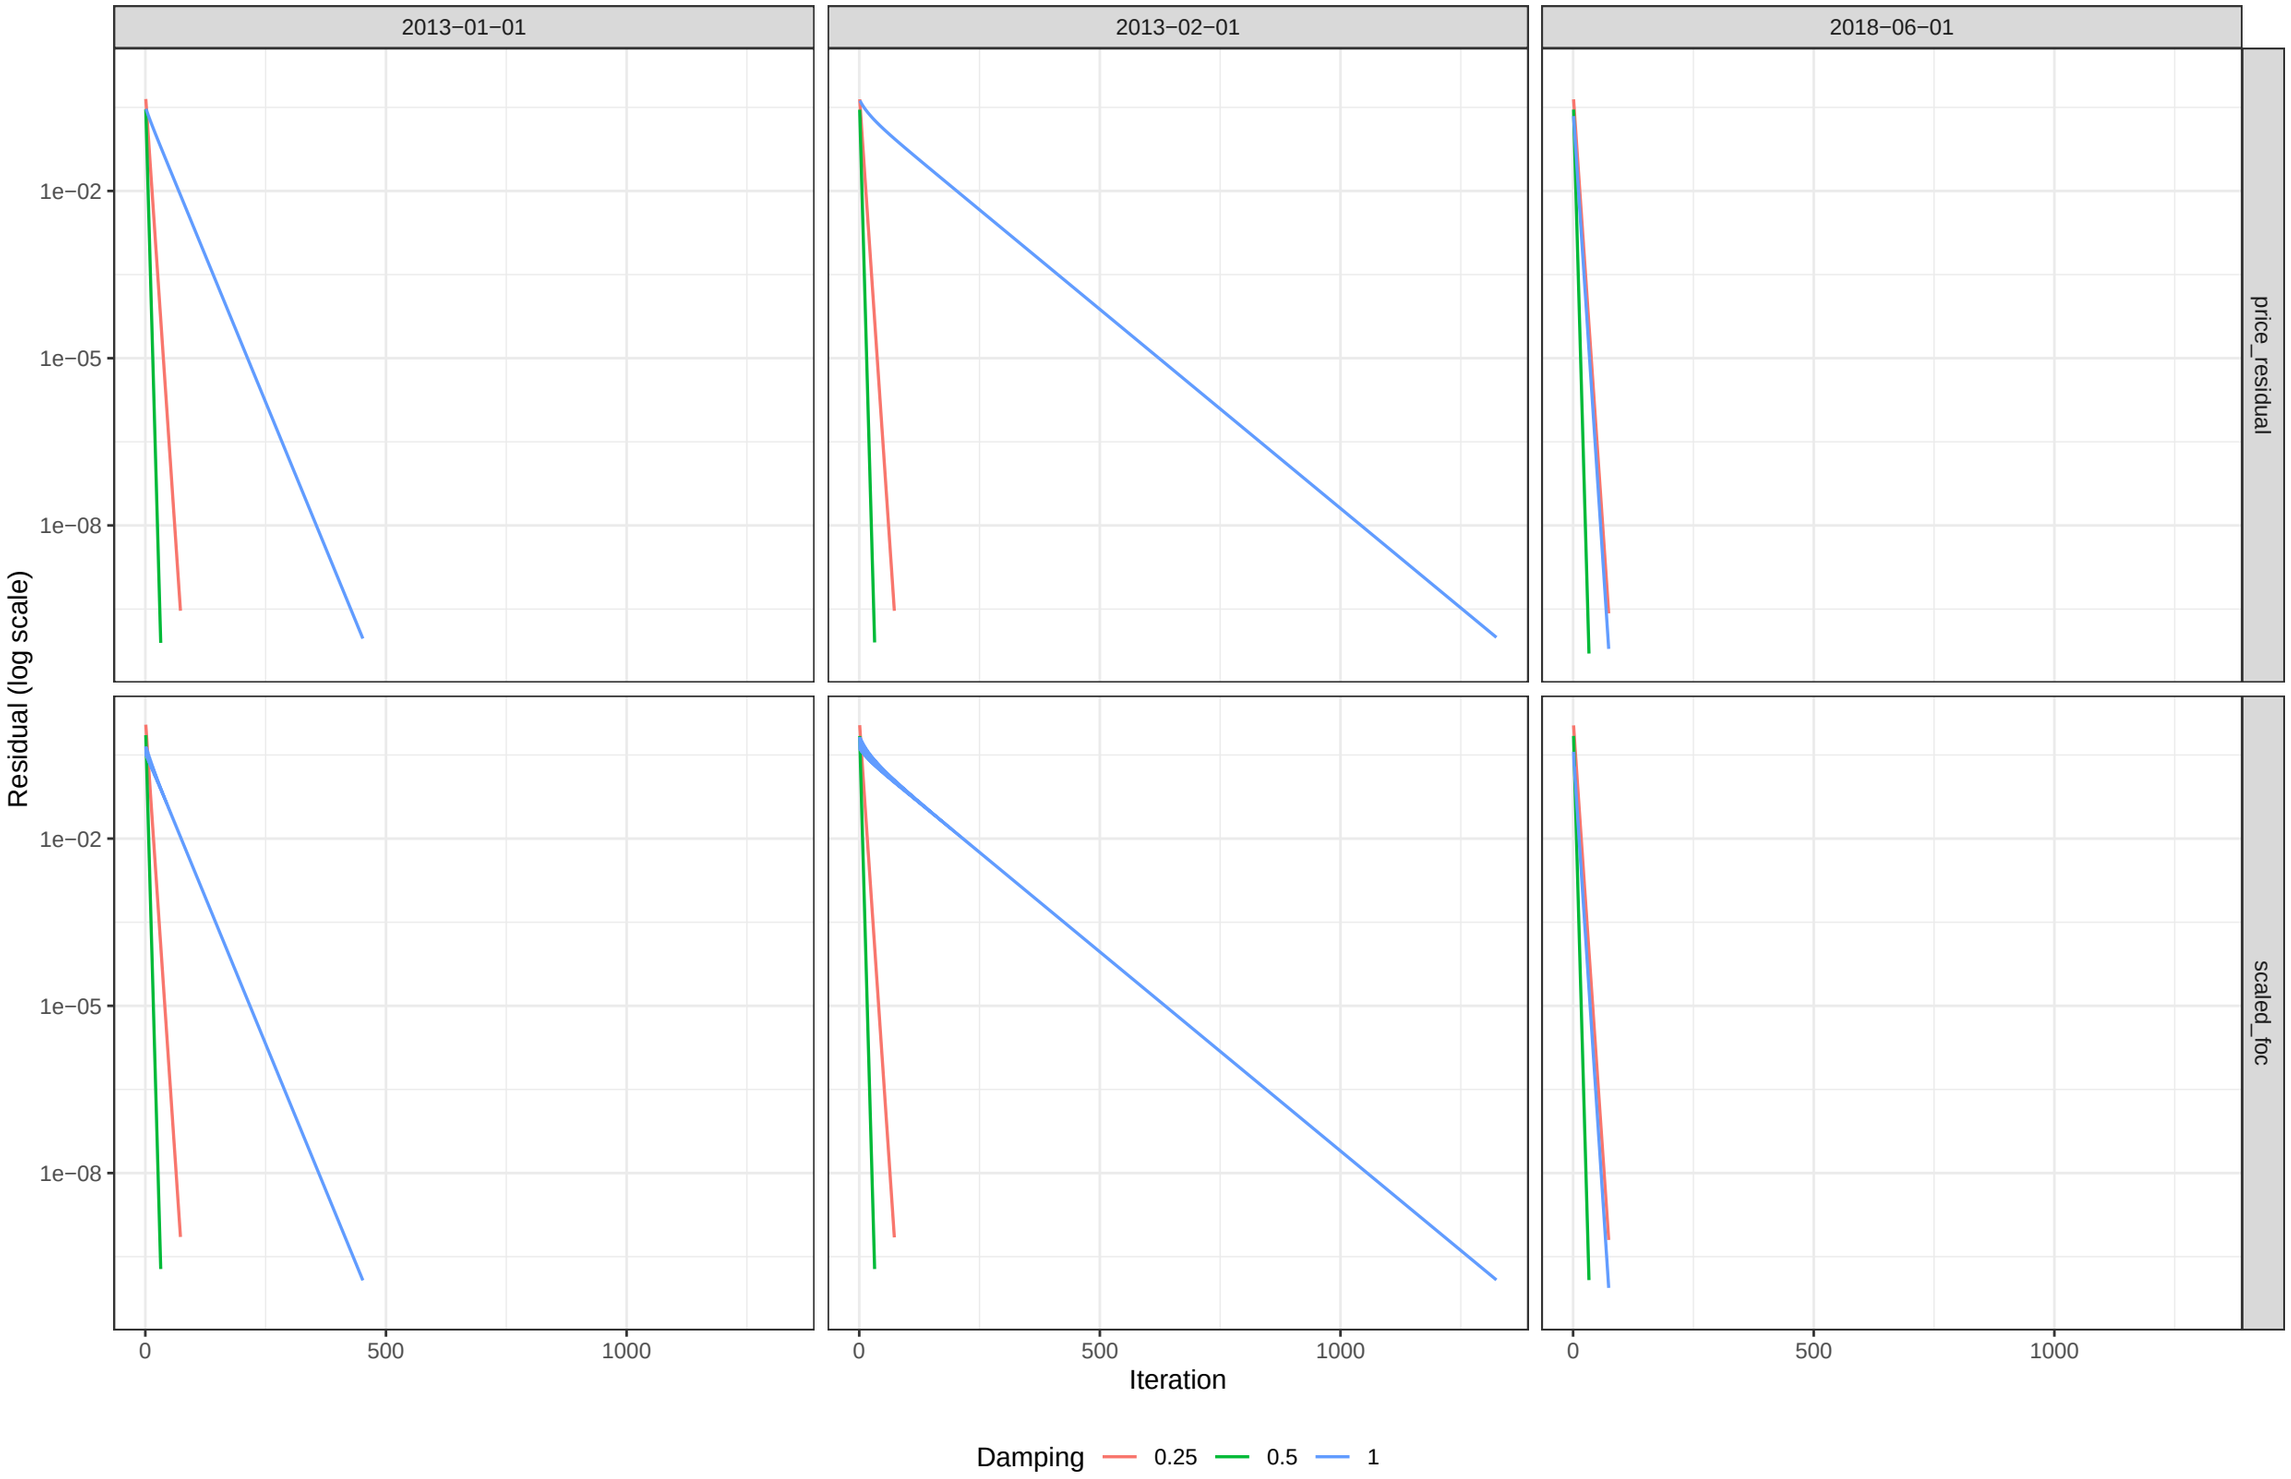

Price, recovered marginal cost, and markup

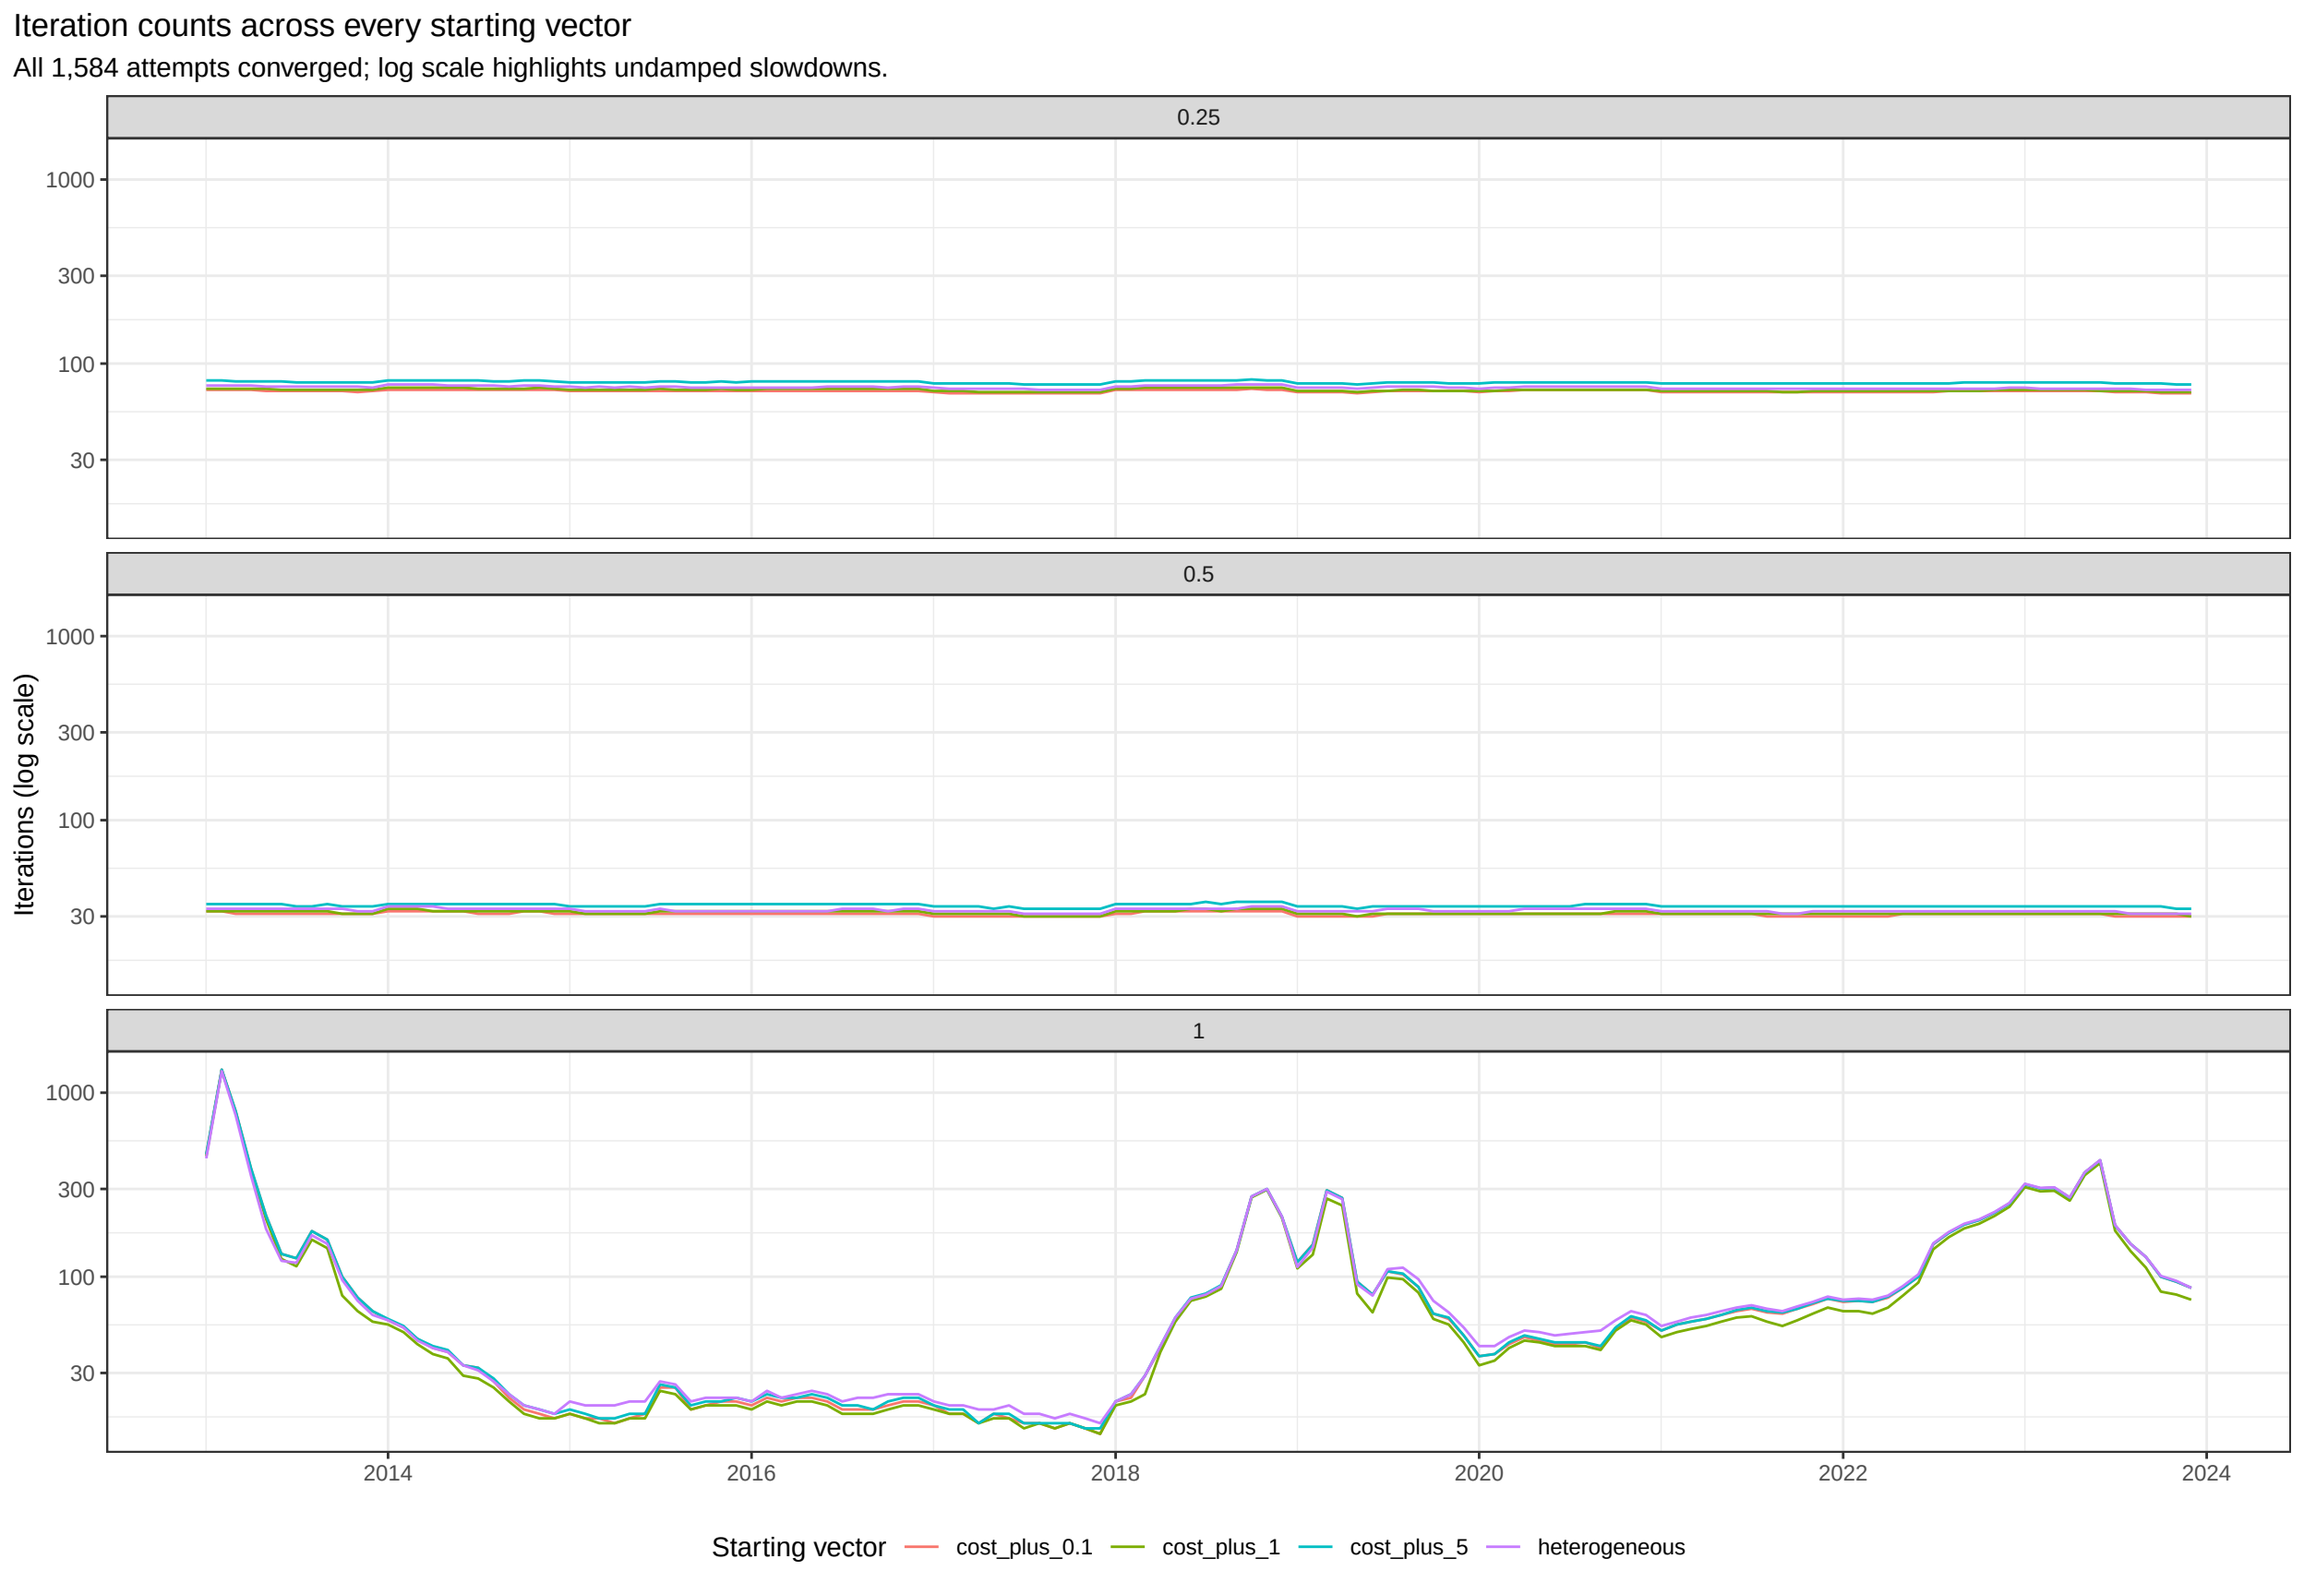

Integrated−channel costs; profits exclude unspecified fixed operating costs.

Convergence from marginal cost + $1/mL

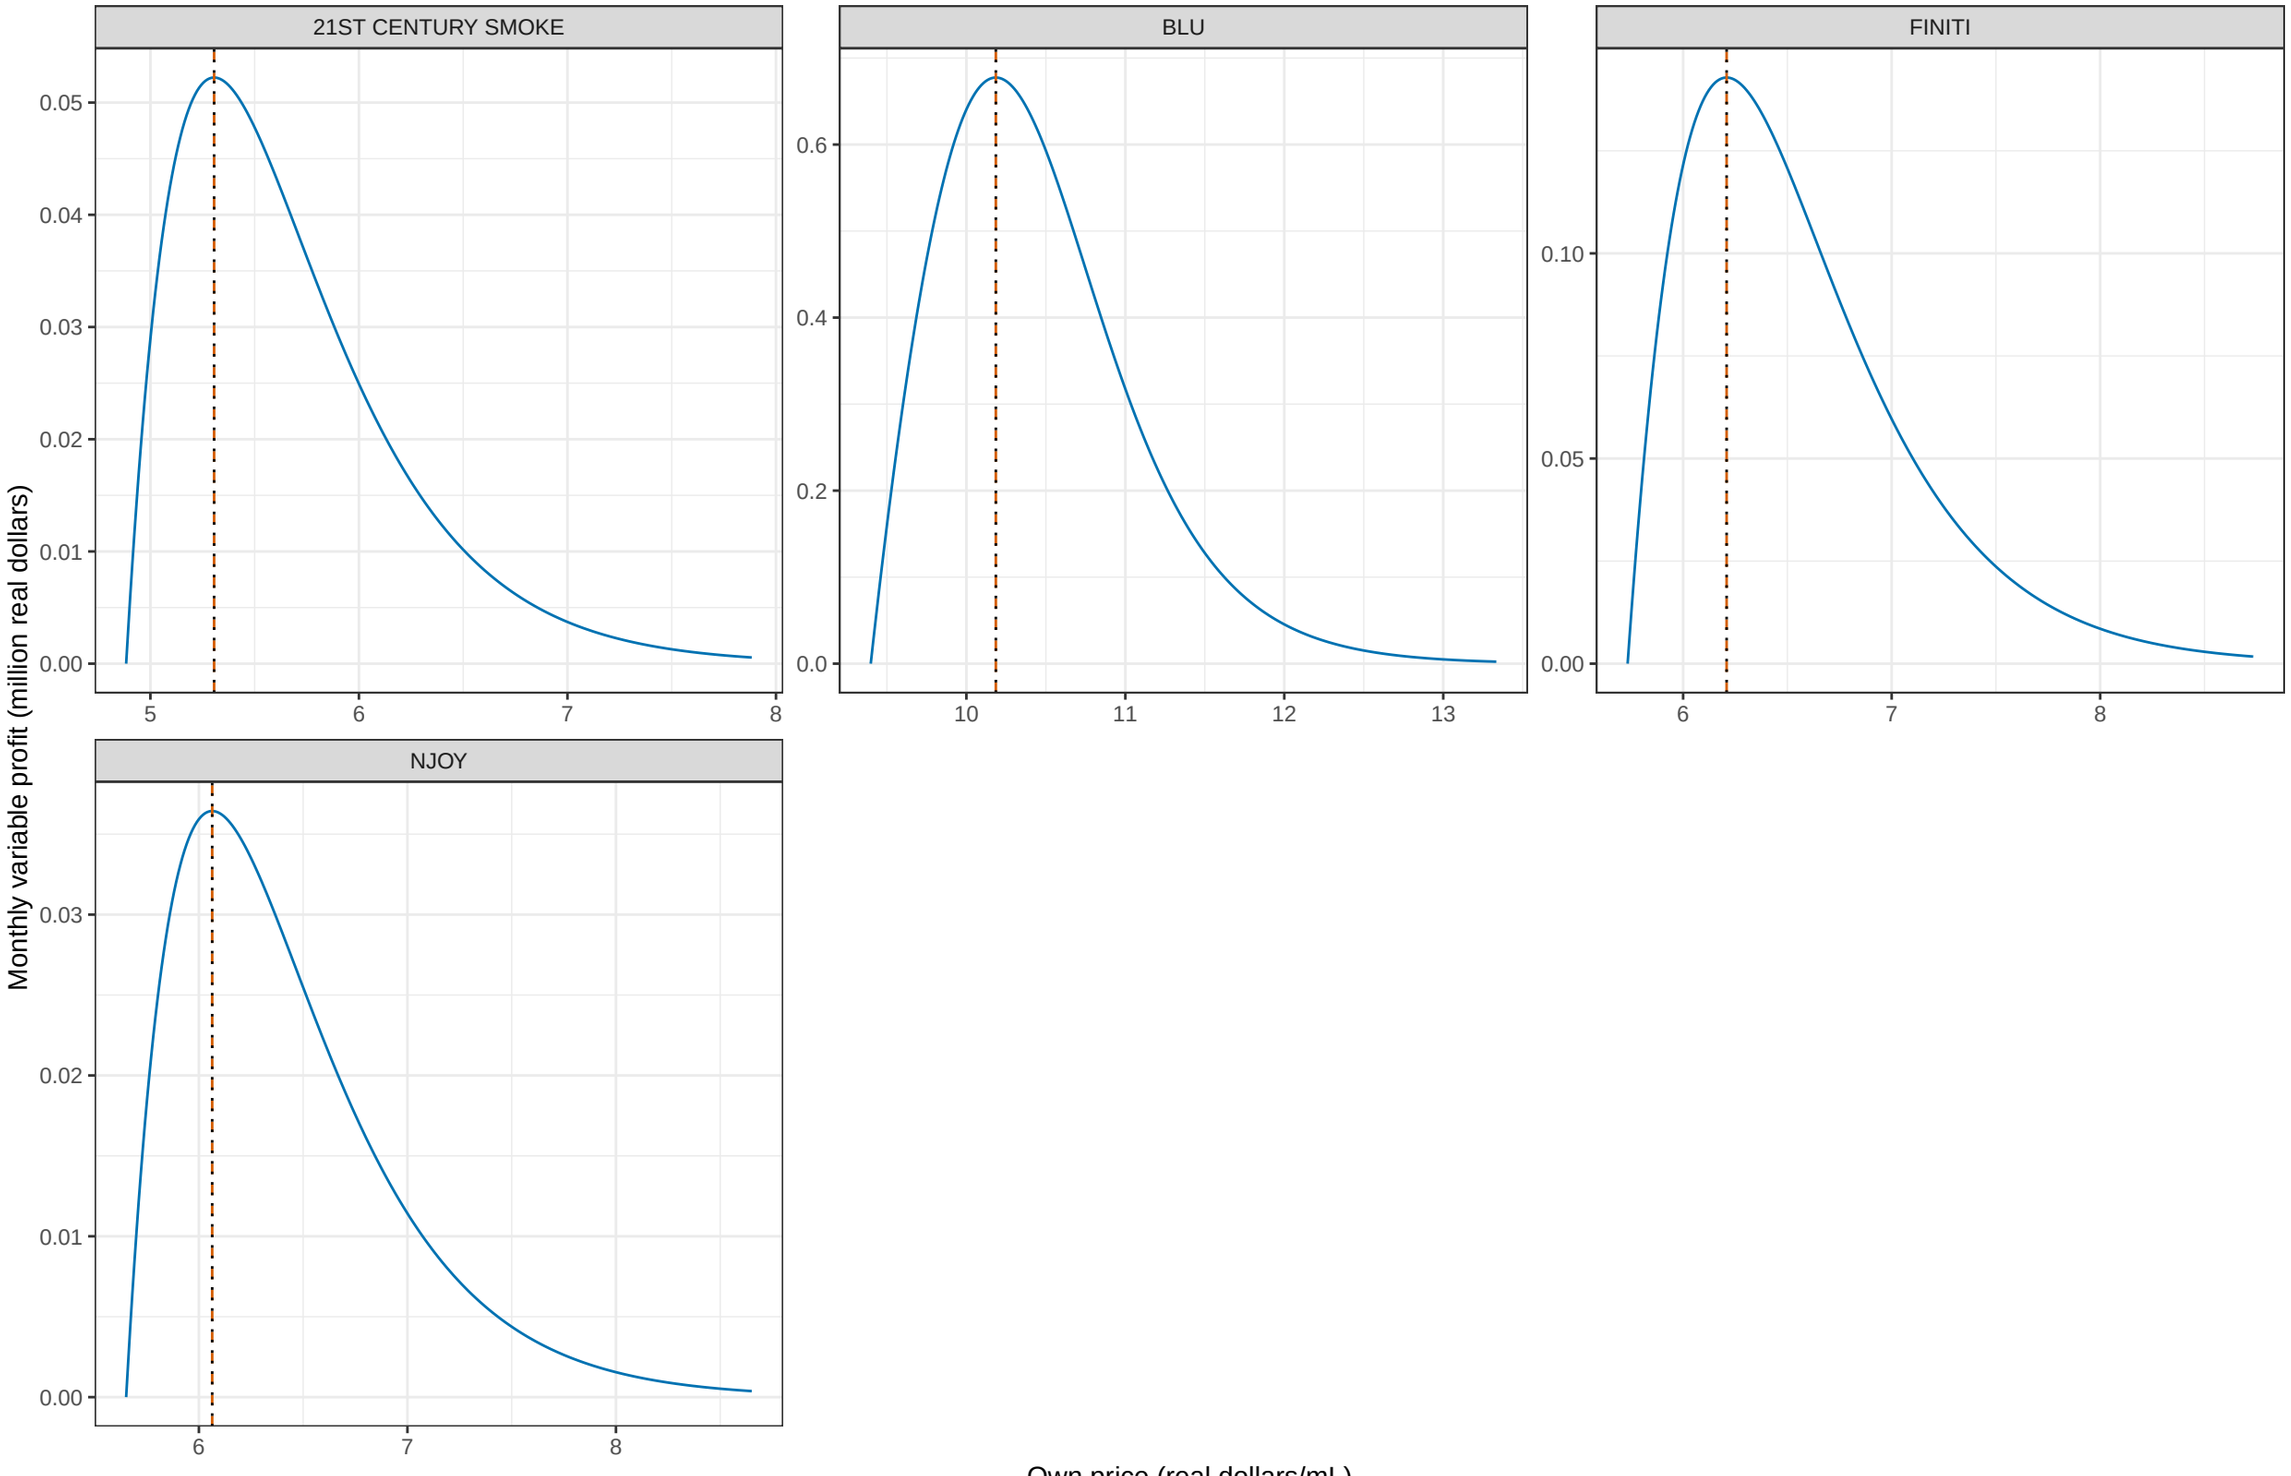

First, middle, and slowest month. Full undamped iteration path retained.

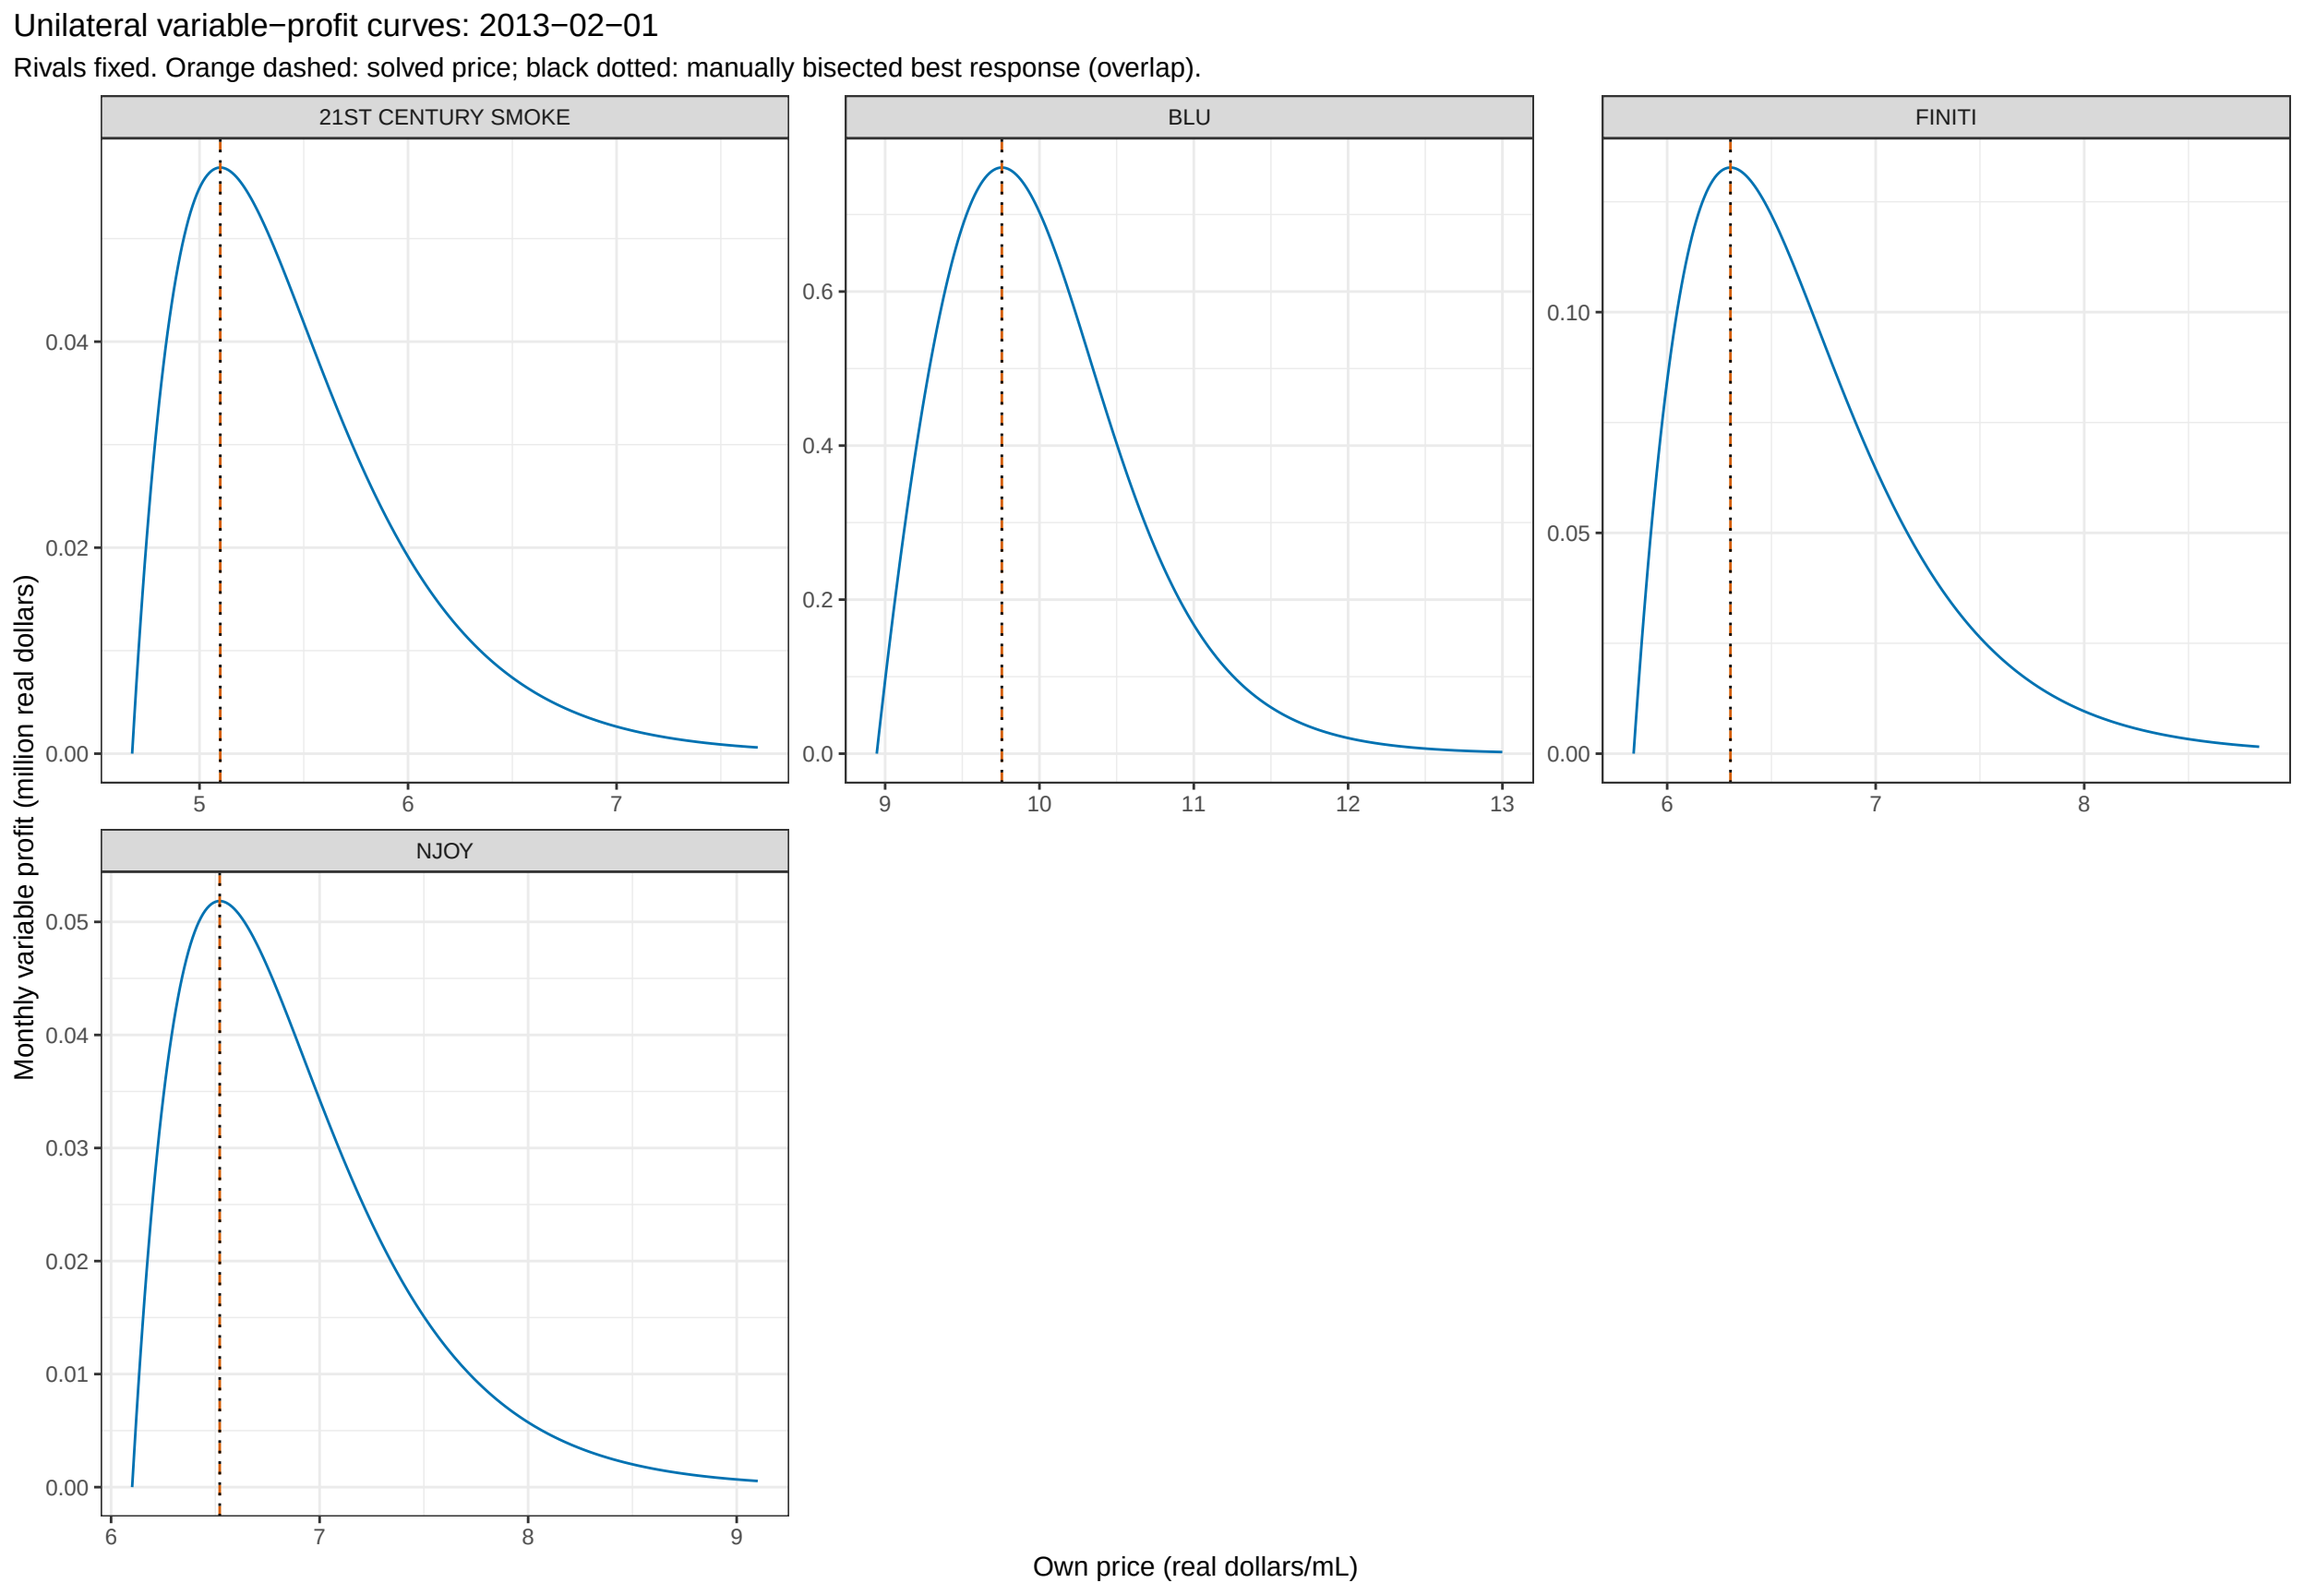

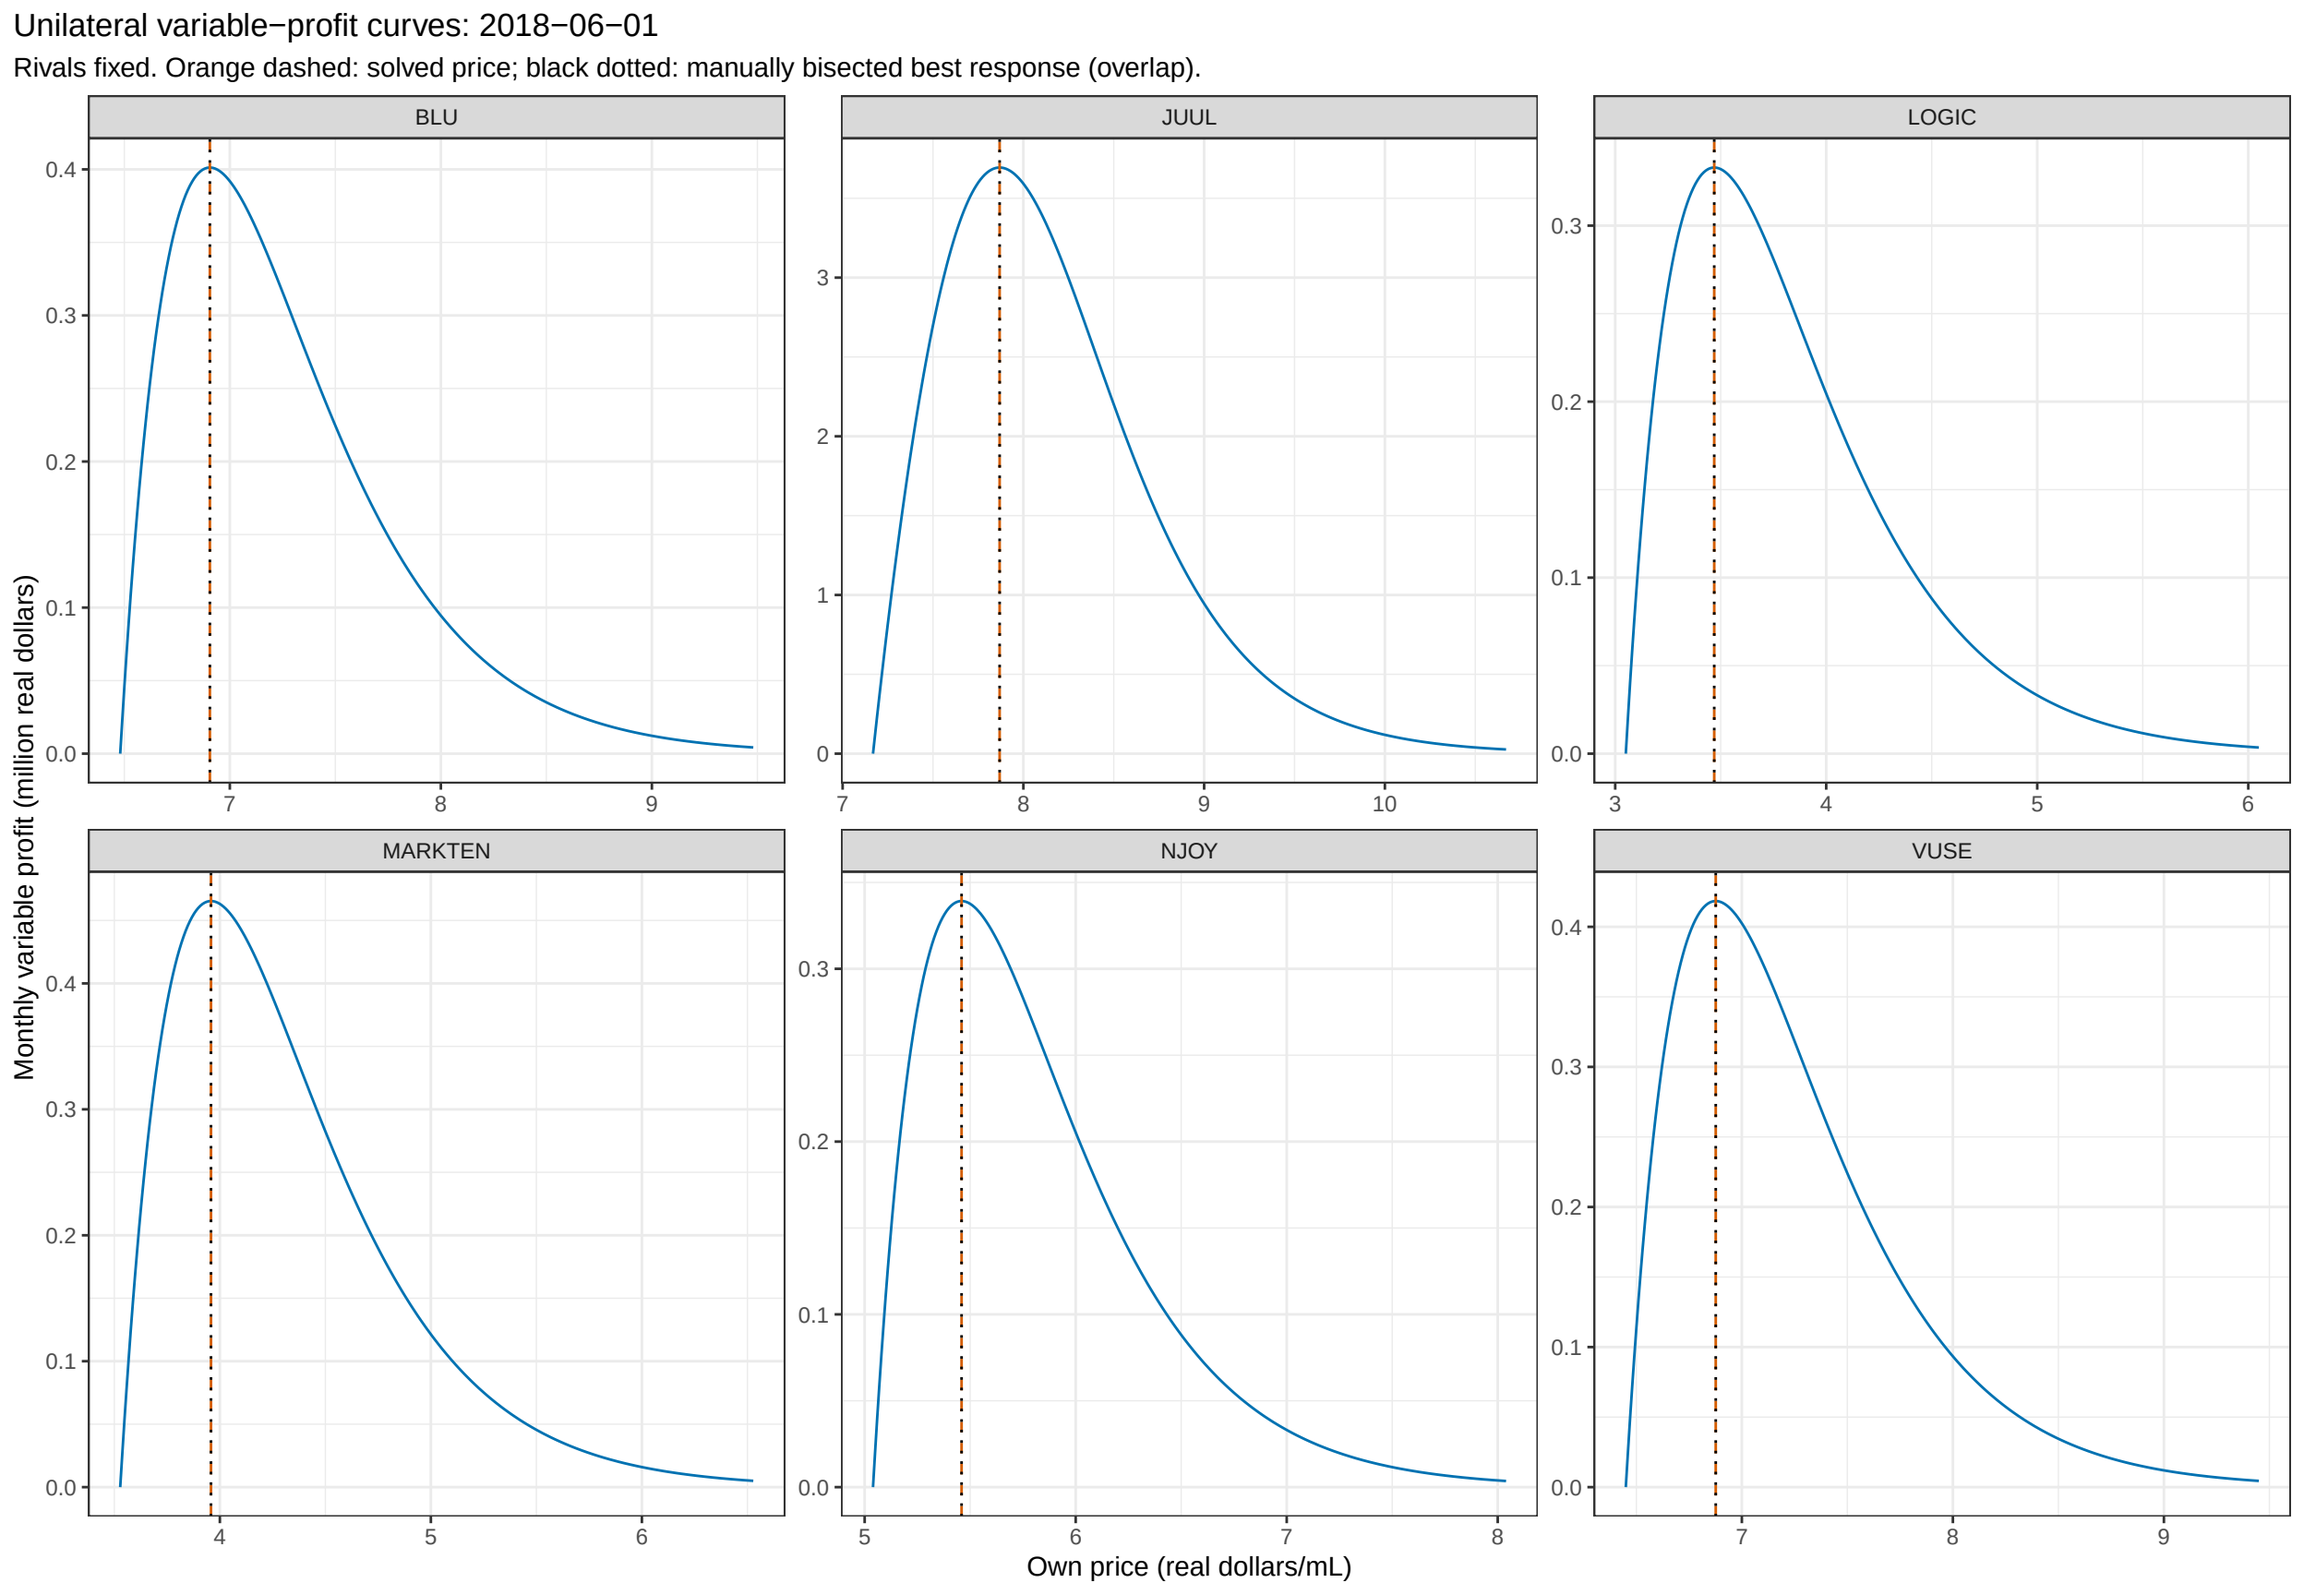

Iteration counts across every starting vector
All 1,584 attempts converged; log scale highlights undamped slowdowns.

Numerical cost perturbation: VUSE 2023−12

Largest−volume firm in latest month: effective marginal cost +10%; demand states and fringe utility fixed.
